## 解决ubuntu(chrome)的闪屏问题

### Posted on August 12, 2016 by bsns

上一篇为了解决chrome的闪屏问题,我升级内核,然而我发现闪屏/花屏问题还是存在,只是几率减少,浑身难受。

我又尝试了另一个明白真相的吃瓜群众的建议

#### 自己配置

sudo gedit /usr/share/X11/xorg.conf.d/20-intel.conf

#### 贴入以下内容并保存

```
Section "Device"

Identifier "Intel Graphics"

Driver "intel"

Option "AccelMethod" "sna"

Option "TearFree" "true"

Option "DRI" "3"

EndSection
```

```
bsns@xps:~ | ⇒ sudo gedit /usr/share/X11/xorg.conf.d/20-intel.conf
                                               20-intel.conf
(gedit
                                                                                                les
                                                                                          Save
                                           /usr/share/X11/xorg.conf.d
op.DBu Section "Device"
                                                                                                id
 by any
           Identifier
                      "Intel Graphics"
           Driver
                      "intel"
           Option
                      "AccelMethod"
                                                                                                e
           Option
                       "TearFree"
                                    "true"
tadata
           Option
        EndSection
   (ge
tadata
```

(http://ww3.sinaimg.cn/large/006ulAEggw1f6rbdgi9lti30sc07zgo6.jpg)

然后进入chrome://flags/

开启

enable zero-copy

enable Override Software Rendering List

enable Display 2D List Canvas

在设置页面仍然保持gpu加速的开启。

到目前为止确实没有再闪了...
